BIRD'S-EYE VIEW OF MERCER UNIVERSITY AS PLANNED

**PRE-ENGINEERING COURSES PREPARE**

Columbia University Accepts Mercer's Technical Training

**3-YEAR COURSE DESIGNED**

To fulfill the demand for engineers liberally trained, a three-year course is designed at Mercer University as preliminary to specialized work in an engineering school. Following the completion of this course and one year in an approved engineering school the student may be entitled to Mercer's A. B. degree.

Those students who have completed this "three-year pre-engineering course" at Mercer are privileged to enter the Columbia School of Mines, Engineering, or Chemistry, without examination on the same basis as those completing the corresponding course in Columbia College. Columbia University will grant a scholarship to any student of Mercer University, upon condition that he has completed with satisfaction this three-year course, with an accompaniment of sufficient recommendation from Mercer's Professor of Physics.

**Combined Course.**  
 For those who desire to secure an A. B. degree previous to entering an engineering school a combined "Four-Year A. B. and Pre-Engineering Course" is offered. This course in addition has been adapted for such

students as come to Mercer with a different group of entrance units from those required for the three-year course; or there might be some wishing to transfer from another course in the University upon completion of work not required for the engineering degree. In a case of this kind the "Combined Four-Year A. B. and Pre-Engineering Course" would be the ideal alternative.

Dr. Herbert Johnson, graduate of Mercer University, 1917, is now a professor in the scientific department of Columbia University, N. Y.

**BESSIE TIFT LOCATION**

The College is situated in Middle Georgia, a section of which General Toombs said: "For purity of water, healthfulness of climate, variety of products, and desirableness of residence, it is unsurpassed by any country of equal extent on the globe."

Forsyth is near the center of the State, on the Central of Georgia Railroad from Macon to Atlanta, distant one hour's travel from the former city, and two from the latter. Being in altitude 655, which is 321 feet higher than Macon, and in latitude a little above the parallel of 33 degrees, it escapes malaria incident to counties south, and is free from the intense cold of the mountain regions of the north. The size of the place serves to supply the needed social, literary, and religious advantages of an intellectual community.

**MERCER SYSTEM OF SCHOOLS AND COLLEGES**

(Continued from Page 6.)  
 Ingham Industrial School, Blue

Ridge, Ga., W. L. Cutts, president.

Several thousand students are every year enrolled in the Mercer University System of Schools and Colleges.

**BESSIE TIFT WATER SUPPLY.**  
 Pure water is supplied the college from two artesian wells on the college grounds, and this water is tested periodically by the State Board of Health.

Quick silver sells at the rate of about \$50 a flask.
